

HIGH QUALITY, FUNCTIONAL CATTLE

BUCK RIDGE

Inaugural Production Sale - 2 PM

MARCH 6, 2023

At the Farm - 3358 Highway F - Seymour, MO

Selling 44 Angus & Lim-Flex Bulls,
6 Bred Heifers and 8 Genetic Opportunities!

BUCK RIDGE

Welcome to our First Annual Spring Sale!

It is with great excitement that we offer this set of bulls and select bred heifers for your appraisal. The sale will take place at our headquarters here in Southern Wright County and we will have online bidding available through DV Auction. These cattle represent our breeding philosophies well and are accompanied by all the performance data to allow you to make the most informed decision. We hope as you study the EPD's you can appreciate our dedication to raising balanced cattle with above average growth and carcass traits built in. At Buck Ridge, our cattle are managed on fescue pasture year-round just like our commercial cattleman neighbors. This stout, rugged group of 18 month old bulls have been raised on fescue pasture every day of their life so that there is little adapting needed when they go to their new homes and graze with your cowherds. This requires us to take a substantial amount of potential grazing acres away from the cowherd and commit them to bull development. We believe this commitment is best in the long run for the bulls and our customers.

BRCC bulls sell with a breeding soundness exam and are part of a full herd health protocol administered by our veterinarian, Dr. Michael Spragg, DVM of Spragg Veterinary Clinic. We are thankful for his great service, knowledge, and friendship over the last 20 years.

Buck Ridge Cattle Company is a family owned and operated operation. We take a huge amount of pride in that statement. We know firsthand the time and financial commitment that our customers have invested in their farms, ranches, and cattle. Our passion for raising the best quality genetics and selling them at fair value is as strong as ever and we are excited about the future of the beef industry. This sale would not be possible without the efforts of many and for that we are thankful.

In closing, thank you for taking the time to look at our offering. We are extremely honored to continue to work with our repeat customers and would be grateful for the business of first-time customers.

Please feel free to call, message, or stop by anytime to look at the offering or discuss any questions you might have.

Thank you & God Bless,
Mark Haden, Logan Haden, and family

A herd of black cattle is gathered in a field of dry, yellowish grass. The scene is set at sunset, with a bright orange sun on the left side of the frame, casting a warm glow over the landscape. In the background, there are bare trees and a line of hills under a clear, light blue sky. The overall atmosphere is peaceful and rural.

HIGH QUALITY, FUNCTIONAL CATTLE

Announcements

- A sale day meal will be provided.
- The cattle are on site and can be viewed any time.
- The cattle will sell on TV screens in our sale facility.
- An up-to-date supplement sheet will be provided sale day. All announcements made from the sale block take precedence over printed material in this sale book

Guarantee All bulls selling are fertile to the best of our knowledge and have passed a breeding soundness exam by a licensed veterinarian. Bulls that sell for \$3,000 or more come with a 1st breeding season guarantee. The 1st breeding season is defined as the 90 days following the first turn out. Should the bull become injured at any point in the 1st breeding season, a satisfactory replacement will be given if available or sale credit in a future Buck Ridge Sale equal to the purchase price less salvage value. Please contact us immediately if an injury occurs so we can quickly make it right.

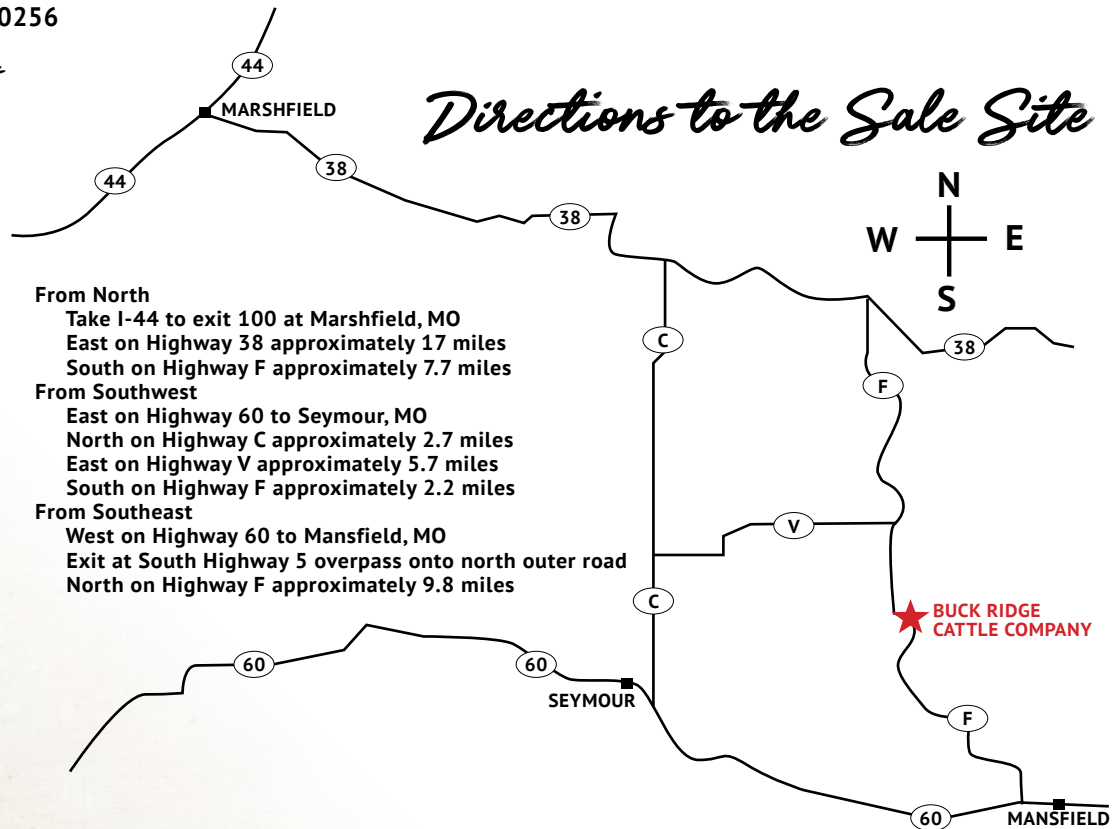

Bull Delivery Bulls selling for over \$4,000 will have FREE delivery up to 500 miles and ALL bulls selling will be delivered for free within 100 miles. If you're over 500 miles, we will get your bull delivered at an additional fee. We will make every effort to get the bulls delivered in a safe and timely manner.

Watch and Bid Online!

The sale will be broadcast live on DV Auction. Please register to bid at least 24 hours in advance of the sale.

ABOUT BUCK RIDGE

BUCK RIDGE CATTLE COMPANY is owned and operated as a family partnership in Southern Missouri on over 2,000 acres of fescue dominant pasture and hay ground. Our headquarters are located in Wright County. The BRCC operation started with very humble beginnings and has been in a constant state of growth over the last 20 years since those first 9 commercial cows were purchased.

It has become our life's passion to raise cattle and make the best product possible for our customers. We currently breed around 400 females annually using artificial insemination or embryo transplant. The BRCC cow herd is managed using rotational grazing with stockpiled fescue being our primary winter feed source. The cattle are expected to perform well and breed back in a short window while on pasture with minimal supplementation. Our Angus and Lim-Flex cattle have built in traits to ensure they will perform in the pasture and feedlot. The Buck Ridge breeding philosophy focuses on fertility, growth, and carcass merit by utilizing EPDs and data collection.

We love to visit with folks about our operation and how Buck Ridge bulls can improve the profitability of our customers' cattle herds. God has blessed our family with the land, cattle, and passion that make up Buck Ridge and we are very excited to continue growing our cowherd in the future.

Angus UNDERSTANDING THE DATA

Production

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Maternal

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Management

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Carcass

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$Values

Maternal Weaned Calf Value (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

Beef Value (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

Dam of Lots 1-2, 4, 6-9, 10-13 - EXAR Miss Beauty 2819

Sire of Lots 1-2 - BUBS Southern Charm AA31

Full Brothers - Lots 1 & 2

Our cornerstone Angus donor, EXAR Miss Beauty 2819, has 11 sons in this sale. She injects structural correctness, muscle shape and an attractive look while always delivering IMF and performance. In 2018, three of the ten Express Ranches carload bulls at the National Western Stock Show were out of our Miss Beauty 2819!

Home Town Sons

Lots 3-9 are all paternal brothers by the number one bull for registrations in the Angus breed in 2022 and for good reason. As you can see, the multipurpose ability of these sons who most would be suited for heifers and are all optimal on growth. They are stamped with a consistently attractive and correct look. These bulls will drive higher market premiums as they offer big marbling and rib eye combinations. Look to lots 4,6,7,8,9 who are flush brothers to purchase multiple bulls to add consistency.

Full Brothers
Lots 10-13

These four flush brothers in lots 10-13 would be suitable for heifers and are out cross for most Angus users in the area. Built for longevity and easy fleshing by pedigree. If you're keeping daughters back, their sire ranks high in the breed for Maternal traits. These are 2 of the 11 maternal brothers to the lead off pair of bulls as well as lots 4, 6, 7, 8, 9.

Calving Ease Champions!

These three paternal brothers by our herd sire are excellent heifer bulls who rank in the top 1 and 2% of the breed for the calving ease direct trait. Even better, they are high marbling and ribeye bulls that will help generate down chain revenue. Their sire is easy fleshing, heavy muscled, and long bodied.

Jet Pack Sons

What a set of paternal brothers by our pick of the Fall 2021 Express Ranches sale. True to Jet Pack type and kind, these are thick and attractive cattle with that little bit extra length and frame to generate the feeder cattle buyers demand. Like most in this book, these bulls have the ability to keep good eye appeal and sturdiness with marbling.

Limousin UNDERSTANDING THE DATA

Maternal and Growth Traits

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease.

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Scrotal circumference (SC): Is a good indicator of age at puberty, and is a highly heritable trait. EPDs for scrotal circumference are expressed in centimeters, with higher values indicating genes for larger yearling scrotal circumferences of sons and earlier puberty of daughters.

Docility (Doc): Predicts genetic differences in the probability that offspring are scored a 1 (docile) or 2 (restless) as opposed to 3, 4, 5 or 6 (nervous to very aggressive). Higher EPD values for docility represent genetics for calmer behavior.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease.

Milk (MK): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. A greater TM value means a mother that returns comparatively higher weaning weights on her calves. $TM\ Index = MK\ EPD + \frac{1}{2}\ WW\ EPD$.

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six year of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

Carcass Traits

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib. Smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

Mainstream Terminal Index (\$MTI): Predicts genetic differences in profit per carcass by combining the potential for and value of post-weaning growth, quality grade and yield

Homo Polled (P-1), Homo Black (P-1)

BRCC Jetsetter 1520J is a special individual that rises to the top of the Lim-Flex bull offering. He has herd sire written all over him.

Sire of Lot 30 - AHCC Dakota Thunder 363D

1520 has been a phenotypic standout of the bull pasture for a long time. He's stout, masculine, moderate framed, and slick haired. He does so many things right when we think about the traits that are needed to thrive in all segments of the cattle industry. Numerically, he offers an 85 weaning weight and a 138 yearling weight paired with top 2% marbling and top 1% mainstream terminal index. Another important feature is that he is backed by a strong maternal cow family. His dam is a picture-perfect Lim-Flex with a good production record. His granddam is an 8 year old female still bringing in a big calf. His great granddam, AUTO Exceptional 282S, needs little introduction around Buck Ridge. She is found in the bottom side of almost all of our herd sires and for good reason. We say all this to emphasize that 1520 is more than just an individual, he is the BRCC program. His combination of presence and numbers project him to be the type of herd bull that will leave a lasting impact on the breed.

A herd bull that will leave a lasting impact on the breed.

Dam of Lots 31-32 - Auto Exceptional 282S

Homo Polled (P-1), Homo Black (P-1)

1587 and his flush brother are the last 2 sons of 282S to sell and she may have saved the best for last. He is stout, long as a train, and gentle as a dog. It doesn't take long for your eye to find him in the bull pasture. His sire, SAV America, topped the Schaff Angus Valley sale at \$1,887,500 and needs little introduction. BRCC Jackpot 1587J has the pedigree, performance, and phenotype to be a valuable breeding piece. Don't miss him on sale day.

**The last two EXCEPTIONAL 282S sons.
She's had 122 calves!**

Homo Polled (P-1), Homo Black (P-1)

Just like his brother, Lot 31, he is the last of our 282S sons that have been so popular at BRCC. His dam, 282S, is responsible for building the Buck Ridge Lim-Flex cowherd. It is bittersweet for us to see these last 2 sons sell. 1571 is wide-topped and stout made. His length of body is impressive and will add additional pounds at weaning. He boasts an 81 for weaning weight and a 126 for yearling weight. If you're searching for a bull that will improve growth and carcass merit look no further.

Sire of Lots 31-32 - S A V America 8018

282S is the dam responsible for building the Lim-Flex herd at BRCC.
