MAIL & TELEPHONE ORDER BIDS

Bids will be handled in strict confidence by any of the publication representatives or Red Western representatives.

HEALTH

All bulls are guaranteed breeders and assured healthy on sale day. They have all passed a semen evaluation by a certified veterinarian.

INSURANCE

Bull Mortality and Infertility Insurance will be available sale day with Martin-Trudeau Insurance.

LIABILITY

All persons who attend the sale do so at their own risk. The hosts assume no liability, legal or otherwise, for any accidents which may occur.

DELIVERY

Pick up your bulls from Crawford Livestock by Sunday evening and receive \$50 per bull discount. We will deliver the bulls free of charge to central locations in Nebraska, South Dakota and Wyoming. Anything outside of this area will be at least cost possible. Please let the office staff know at settlement time what you will be doing with your bulls.

CALVING EASE RECOMMENDATIONS:

- ★★★ Recommended for heifers and cows
- ★★ Recommended for large heifers and cows
- ★ Recommended for cows only

Current weights and scrotal size will be available sale day.

Video of the bulls available at dvauction.com

Sale will be broadcast live on dvauction.com

If you are not able to attend the sale, please be sure to register at DVAuction at least 2 days ahead of the sale.

CATTLEMEN

According to CattleFax, beef is in demand now more than ever in the last 40+ years. This, plus many other factors have made your product and hard work worth more. Years of developing a herd that fits your environment and produces a favorable product is finally paying off. Grill's Red Western is proud to play a small part in helping you build a stronger, more sustainable cow herd. Cow numbers are at all-time lows, while quality beef is at an all-time high and surveyed Americans are pleading for all we can produce. The future looks very encouraging!

We value the great relationships we have developed over the past 20 or more years and are very excited to help past and new customers alike.

Sired by the 2024 Black Hills Champion Red Angus bull Legacy 1999, 5337N looks to carry on his sire's ability to be a herd improver. Legacy 1999 combines characteristics we like to proliferate, like heavy muscle, athletic deep structure and great feet. This Legacy son also comes from a gorgeous female by Power Eye, one of the shortest profiling Red Angus bulls to date.

Another Legacy son, quietly making his mark. I absolutely love this dam, 8042F. Her sire, Medal, was one of our all-time best female makers. You could always count on fault free udders, good feet and fertility. Her maternal grandam, Anasco R027, was a cow you wanted to keep all the daughters. EPD's for this bull showcase excellence in Herd Builder and Heifer Pregnancy.

Epic was pulled out of the tank because of his great ability to produce very desirable, good uddered females. He will also put the pounds on. Over the years I've looked at a lot of Epic progeny and they always display a heavier type of structure. 5319N's grandam is still producing at age 12.

The dam of N073 definitely puts some performance in her offspring. She is a 8 year old 1325 lb cow with a good udder. We went back to using the Retro bull after seeing his daughters come into production. They may not wow you at first look, but they mature into beautiful mama cows. N073 will give you some growth and leave you with some great replacements.

A sale highlight by Game Changer. We lined up female performance ability in this winner. Game Changer's dam is an example of how good Red Angus mamma cows should look like and perform. High Stakes' dam, Doll 80, was a great long time donor cow who calved at age 15 and produced an enormous amount of herd changing progeny.

Another good 900J son that comes from the C005 donor cow lineage. The K013 dam is a 1200 lb feminine cow with a beautiful udder. This is definitely the most performance driven 900J son. Going from a modest 80 lb BW and weaning at 671 lbs with a 115 WW ratio. This guy could go about any direction you need him to.

We spend a considerable amount of time matching up pedigrees with real world performance. Something that the Red Angus founders believed in. This is a prime example. Starting with the females in the pedigree, his sire's dam has an MPPA of 112 while his own donor dam has an MPPA of 104, solid! His excellent WW proves he has the ability of grow fast while maintaining that great maternal input.

One of those calves that has stood out since birth. Weaning ratio of 110 Top 2% of breed for HPG. A strong top and heavy muscle are comments from everyone who has seen him makes. His dam has always produced front end calves while racking up a 103 MPPA. A daughter of the maternal giant Redhill Medal, she combines not only the best maternal strengths possible, but the ability to produce power when asked to.

This is where EPD's don't tell the whole story. The two powerhouses in this pedigree were both the most used sires in the entire breed at one point. If the actual performance and appearance matter to you, I think it would be hard not to put him on your short list. 815 ADJ WW gaining over 4.0 lbs/day.

We've all heard about how King Rob changed Red Angus history. Sampson was also blessed to have a fabulous Mulberry dam, who displayed a tremendously deep body and perfect udder. As great of a producer Mulberry was, I believe 924 was one of the greatest daughters ever.

Throwback to two breed greats!

For real heifer bull! In hopes of making a real sure fire heifer bull, we used a high accuracy blast from the past in Make Mimi and crossed him on a can't be beat Drifter daughter. The dam brings a lot to the table in terms of size, moderation, unparalleled udder, extreme fertility and of course, sure fire calving ease. We think so much of her that we started to flush her as a first calf heifer. Watch for sale toppers by this cow in the future.

TESTIMONIALS

“ I sure appreciated the opportunity to work with the family on the development of these Red Angus Bulls. If athletic, growthy, and easy fleshing are traits you look for in bulls, these bulls cover those bases, plus some! Low starch feedstuff (corn silage, alfalfa/grass hay, wet distillers, CHS Champion PowerBooster, and some corn) got these bulls to the look they are at today. The two-year-olds came off grass and were put on a 40MCal diet, they took off immediately and fleshed up, which set the tone on how to feed the yearlings. High protein, low energy and let them grow into the look of their older brothers! ”

— Jason Semmler, CHS Animal Nutrition

“ I purchased commercial open heifers from Jeff Grill in April 2025 and placed them with Jason and Peyton Drudik of Drudik Cattle, Nelson, NE, for custom care. They all bred in a timely manner and have great phenotypes. Jason and Payton were impressed with the disposition, handling ability and calving ease of the heifers. Jeff was excellent to work with regarding delivery and followed up on how the heifers performed. ”

— Tom Hiebert

“ Those were really nice and gentle heifers. Calving ease was great. Wish there would have been a semi load of them!! All calved out great and all stuck to AI. Would sure love to have them in the future. ”

— Gran Ranch Red Angus

PROFIT. REPEAT.

Generate repeated profits with the industry's most-favored female.

Independent research from a decade of data collection showed Red Angus-sired heifers commanded \$66/head more than females of other breed types. That's nearly \$5,300 on a single load of replacement heifers to boost profits on your operation.

Visit RedAngus.org for details on the industry's most-favored female.

A large brown Red Angus cow with a yellow ear tag and two calves in a field. The cow is in the center, looking towards the camera. Two calves are in the foreground, one on the left and one on the right, both looking towards the right. The background is a field of tall grass under a clear blue sky.

RED ANGUS
RANCH TESTED. RANCHER TRUSTED.

Red Angus Guide to EPDS and Indexes

ProS... Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM..... GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)
